Function Spaces Entropy Numbers Differential Operators Cambridge Tracts In Mathematics:

Function Spaces, Entropy Numbers, Differential Operators D. E. Edmunds, H. Triebel, 2008-02-04 The distribution of the eigenvalues of differential operators has long fascinated mathematicians. Recent advances have shed new light on classical problems in this area and this book presents a fresh approach largely based on the results of the authors. The emphasis here is on a topic of central importance in analysis, namely the relationship between i) function spaces on Euclidean n space and on domains, ii) entropy numbers in quasi-Banach spaces and iii) the distribution of the eigenvalues of degenerate elliptic pseudo-differential operators. The treatment is largely self-contained and accessible to nonspecialists.

Function Spaces and Wavelets on Domains Hans Triebel, 2008 Wavelets have emerged as an important tool in analyzing functions containing discontinuities and sharp spikes. They were developed independently in the fields of mathematics, quantum physics, electrical engineering, and seismic geology. Interchanges between these fields during the last ten years have led to many new wavelet applications such as image compression, turbulence, human vision, radar, earthquake prediction, and pure mathematics applications such as solving partial differential equations. This book develops a theory of wavelet bases and wavelet frames for function spaces on various types of domains. Starting with the usual spaces on Euclidean spaces and their periodic counterparts, the exposition moves on to so-called thick domains including Lipschitz domains and snowflake domains. Specifically, wavelet expansions and extensions to corresponding spaces on Euclidean n spaces are developed. Finally, spaces on smooth and cellular domains and related manifolds are treated. Although the presentation relies on the recent theory of function spaces, basic notation and classical results are repeated in order to make the text self-contained. This book is addressed to two types of readers: researchers in the theory of function spaces who are interested in wavelets as new effective building blocks for functions, and scientists who wish to use wavelet bases in classical function spaces for various applications. Adapted to the second type of reader, the preface contains a guide on where to find basic definitions and key assertions.

Explorations in the Mathematics of Data Science Simon Foucart, Stephan Wojtowytsch, 2024-09-12 This edited volume reports on the recent activities of the new Center for Approximation and Mathematical Data Analytics (CAMDA) at Texas A M University. Chapters are based on talks from CAMDA's inaugural conference held in May 2023 and its seminar series, as well as work performed by members of the Center. They showcase the interdisciplinary nature of data science, emphasizing its mathematical and theoretical foundations, especially those rooted in approximation theory.

Function Spaces, Interpolation Theory, and Related Topics Jaak Peetre, 2002 This volume contains 16 refereed research articles on function spaces, interpolation theory, and related fields. Topics covered include theory of function spaces, Hankel type and related operators, Green functions, homogenization theory, Sobolev embeddings, and Coxeter groups.

Distributions, Sobolev Spaces, Elliptic Equations Dorothee Haroske, Hans Triebel, 2007 It is the main aim of this book to develop, at an accessible moderate level, an L_2 theory for elliptic differential operators of second order on bounded smooth domains in

Euclidean n space including a priori estimates for boundary value problems in terms of fractional Sobolev spaces on domains and on their boundaries together with a related spectral theory The presentation is preceded by an introduction to the classical theory for the Laplace Poisson equation and some chapters provide required ingredients such as the theory of distributions Sobolev spaces and the spectral theory in Hilbert spaces The book grew out of two semester courses the authors have given several times over a period of ten years at the Friedrich Schiller University of Jena It is addressed to graduate students and mathematicians who have a working knowledge of calculus measure theory and the basic elements of functional analysis as usually covered by undergraduate courses and who are seeking an accessible introduction to some aspects of the theory of function spaces and its applications to elliptic equations

Faber Systems and Their Use in Sampling, Discrepancy, Numerical Integration Hans Triebel, 2012 This book deals first with Haar bases Faber bases and Faber frames for weighted function spaces on the real line and the plane It extends results in the author's book *Bases in Function Spaces Sampling Discrepancy Numerical Integration* EMS 2010 from unweighted spaces preferably in cubes to weighted spaces The obtained assertions are used to study sampling and numerical integration in weighted spaces on the real line and weighted spaces with dominating mixed smoothness in the plane A short chapter deals with the discrepancy for spaces on intervals
