Construction Estimating Karl F. Schmid, 2011-09-30 This pocket sized book is a concise guide to the basics of estimating construction costs for residential and light commercial building projects It provides a step by step guide to estimating the total cost of a construction project It takes readers through five phases that lead to a successful estimate initial assessment work analysis programming costing and cost distribution and summarization The book's primary targets are small contractors however the principles set forth in the book are applicable to all contractors The book could also serve as a textbook for estimating classes in construction management programs at universities and community colleges The last section of the book provides useful but not readily available information for estimators on diverse topics e g detailed information about Value Engineering scheduling subcontractor selection bid summarization and so on An extensive glossary of construction terms is also included Readers in all construction capacities will find A new fresh look at the often baffling

and deceptive job of estimating construction costs for residential and light commercial construction How to assess plans review bonds and evaluate the site and the project schedule before beginning a cost take off How to integrate a cost estimate into a general accounting program for cost management and eventual billing Incredibly helpful appendix with common construction standards and measurements from standards for concrete forms to nail sizes to commercial lumber sizes and much more *Construction Project Estimating 101* P D Mason,2024-01-31 Are you looking for that construction estimating Edge over your competition on project bid day Or maybe you re a new construction estimator ready to start your career with real world knowledge in your back pocket but don t know where to look Stop look no further and keep reading Construction Project Management 101 is your real world hands on How To guidebook that ensures your construction estimating success right from day one The author P D Mason is not just a skilled trades professional but a 27 year construction veteran with nearly two decades and millions of project dollars of construction estimating success Mason s self taught and self proven estimating methods and processes are now available to every estimator who reads this book Within the book Mason speaks to estimators while mentoring and guiding them through construction estimating topics such as The must know fundamentals of construction estimating How to create an individualized workflow to ensure accuracy while estimating The deep dive details of project specifications How effective communication increases your chances of winning the contract Factors that affect residential or commercial estimating Why risk management is often overlooked by construction estimators The technological future of construction and how it affects estimators How business ethics are pivotal to long term opportunities as an estimator Effective time management to create more estimates A glossary with nearly 250 estimating specific definitions and much more inside the book Let this book be the practical desktop resource that guides you through many common situations in estimating providing solutions that can significantly increase the bottom line of your projects Your construction project estimating career will thank you for reading this book Construction Cost Estimating Len Holm,John Schaufelberger,2021-04 Construction Cost Estimating equips a new generation of students and early career professionals with the skills they need to bid successfully on projects From developing bid strategies to submitting a completed bid this innovative textbook introduces the fundamentals of construction estimating through a real life case study that unfolds across its 24 chapters Construction Cost Estimating ensures that readers are familiar with the entire estimating process before they even set foot on the jobsite Fundamentals of Construction Estimating + Mindtap Construction, 4-term, 24 Month Printed Access Card , Construction Estimating and Bidding: Training Manual to Acquire Fundamental Knowledge in Estimating Building Construction Costs Yvon Chabot,2019-03-05 The purpose of this manual is to enable students to gain fundamental knowledge of estimating the cost of building construction projects The procedures used for estimating vary form company to company On the other hand the construction industry has become over the years more competitive which has made construction companies to do their best in order to offer the best possible service at the least price To overcome this

constraint it is necessary to know precisely the cost of services And it would be the role of an Estimator Unfortunately there are no specific rules as it accounts for obtaining a good estimate even among individuals within a company Because of contracting method currently employed like fast track or PPP construction companies need precision in their estimates in addition as estimators are increasingly consulted at conceptual design stage we will talk about conceptual estimate in chapter one and then focus on detailed estimations and its process in upcoming chapters We all know that a good estimator needs to have a good knowledge about construction techniques and factors that influence the realization of a project We also know that an individual who possesses a high level of experience in his her field but also could be a poor estimator in the absence of reliable method So in this manual we will focus more on estimations method rather than techniques of construction A detailed estimate Bid Estimate can be analyzed in terms of the SIX principal stages of the process 1 Quantity Takeoff 2 Recap Quantities 3 Pricing the Recap 4 Pricing Subcontractor's work 5 Pricing General Expenses 6 Summary and Bid To decode these six steps into an effective and accurate estimation method the manual is divided into three modules Each module is divided into chapters The first module addresses the preparation of an estimate for construction and describes the entire submission process The second module deals with the methods of measurement of the constructive systems then in the third module establish the prices of the elements the expenses of the general conditions and finally close the submission
