Cardiac Electrophysiology Without Fluoroscopy Riccardo Proietti, Yan Wang, Yan Yao, Guo Qiang Zhong, Shu Lin Wu, Félix Ayala-Paredes, 2019-07-10 This book reflects how the concern regarding the effects of radiation exposure in patients and health personnel involved in cardiac electrophysiology EP has inspired new developments in cardiac electrophysiology procedures without the use of fluoroscopy This innovative method has become a subspecialty within electrophysiology with several EP laboratories around the world adopting an exclusive non fluoroscopy approach It features guidance on how to use three dimensional 3D navigation systems ablation energy sources and zero fluoroscopic implantation of cardiac electronic devices The potential complications and associated preventative methods with utilising RFCA are also described Cardiac Electrophysiology Without Fluoroscopy offers a thorough description of the technique correlated to the performance of EP procedure without the use of radiation and provides a valuable resource for those seeking a practically applicable guide on how to perform cardiac EP without fluoroscopy including practising and trainee electrophysiologists cardiac imagers general cardiologists and emergency medicine physicians

Handbook of Cardiac Anatomy, Physiology, and Devices Paul A. Iaizzo, 2010-03-11 A revolution began in my professional career and education in 1997 In that year I visited the University of Minnesota to discuss collaborative opportunities in cardiac anatomy physiology and medical device testing The meeting was with a faculty member of the Department of Anesthesiology Professor Paul Iaizzo I didn't know what to expect but as always I remained open minded and optimistic Little did I know that my life would never be the same During the mid to late 1990s Paul Iaizzo and his team were performing anesthesia research on isolated guinea pig hearts We found the work appealing but it was unclear how this research might apply to our interest in tools to aid in the design of implantable devices for the cardiovascular system As discussions progressed we noted that we would be far more interested in reanimation of large mammalian hearts in particular human hearts Paul was confident this could be

accomplished on large hearts but thought that it would be unlikely that we would ever have access to human hearts for this application We shook hands and the collaboration was born in 1997 In the same year Paul and the research team at the University of Minnesota including Bill Gallagher and Charles Soule reanimated several swine hearts Unlike the previous work on guinea pig hearts which were reanimated in Langendorff mode the intention of this research was to produce a fully functional working heart model for device testing and cardiac research
