Harald Frank, Lukas Feuerstein, 2009-09-18 Seminar paper from the year 2009 in the subject Computer Science Commercial Information Technology grade 1.0 University of Regensburg language English abstract Enterprise Service Buses and related concepts like Service Oriented Architectures are increasing in popularity Businesses are facing new challenges and networking inter and intra enterprise cooperation and collaboration are getting more and more crucial for being ahead of the competitors Enterprise Service Buses are providing a necessary high scalable and flexible IT architecture for integration an improved communication and reducing complexity at least in theory The major goal of this project seminar is to examine the practical use of ESB The first part of this documentation will provide the reader with some theoretical foundations on the Enterprise Service Bus integration paradigms and some required functions of Enterprise Service Buses The following section will then focus on one specific Open Source ESB the Apache ServiceMix that will be presented briefly Its main functions and concepts will be examined in detail Furthermore the setup of a generic development environment debugging principles and tools will be described The following part is the development of an explorative case study that illustrates important features and characteristics of an ESB in a practical way The focus is to illustrate the routing and messaging capabilities of Apache ServiceMix Based on an everyday example the message flow in a restaurant we are trying to demonstrate development principles analyze useful patterns and also illustrate common pitfalls and challenges In the final part lessons learned and some generic recommendations for possible applications of ESBs are presented The project team is observing that ESB is a highly important integration model especially in Service Oriented Architectures Furthermore for some single and clearly defined scenarios the functions provided by Open Source ESBs are already satisfactory On the other hand side ESBs are still emergent there are a lot of instability complexity and a lack of development tools The recommendation is to clearly evaluate ESB and also optional other solutions before its

Conventional wisdom of the software stack approach to building applications may no longer be relevant Enterprises are pursuing new ways of organizing systems and processes to become service oriented and event driven Leveraging existing infrastructural investments is a critical aspect to the success of companies both large and small Enterprises have to adapt their systems to support frequent technological changes mergers and acquisitions Furthermore in a growing global market these systems are being called upon to be used by external business partners Technology is often difficult costly and complex and without modern approaches can prevent the enterprise from becoming agile Enterprise Service Oriented Architectures helps readers solve this challenge in making different applications communicate in a loosely coupled manner This classic handbook leverages the experiences of thought leaders functioning in multiple industry verticals and provides a wealth of knowledge for creating the agile enterprise In this book you will learn How to balance the delivery of immediate business value while creating long term strategic capability Fundamental principles of a service oriented architecture find bind and execute The four aspects of SOA Production Consumption Management and Provisioning How to recognize critical success factors to implementing enterprise SOAs Architectural importance of service registries interfaces and contracts Why improper service decomposition can hurt you later rather than sooner How application design and integration practices change as architects seek to implement the agile enterprise About the Authors James McGovern is an enterprise architect for The Hartford He is an industry thought leader and co author of the bestselling book A Practical Guide to Enterprise Architecture Oliver Sims is a recognized leader in the architecture design and implementation of service oriented and component based enterprise systems He was a founding member of the OMG Architecture Board He was co author of the groundbreaking book Business Component Factory Ashish Jain is a Principal Architect with Ping Identity Corporation a leading provider of solutions for identity federation Prior to joining Ping Identity he worked with BEA Systems where his role was to assist BEA customers in designing and implementing their e business strategies using solutions based on J2EE He holds several industry certifications from SUN and BEA and is also a board member for the Denver BEA User group Mark Little is Director of Standards and SOA Manager for JBoss Inc Prior to this he was Chief Architect for Arjuna Technologies Ltd and a Distinguished Engineer at Hewlett Packard As well as being an active member of the OMG JCP OASIS and W3C he is an author on many SOA and Web Services standards He also led the development of the world's first standards compliant Web Services Transaction product
