environmental impact assessment for structures in the field of the water management The book's environmental impact assessment system for water management structures analyzes the respective risks for different options The results are intended to support the selection of future projects that pose minimum risks to the environment Comparison of alternatives and designation of the optimal variant are implemented on the basis of selected criteria that objectively describe the characteristics of the planned alternatives and their respective impacts on the environment The proposed Guideline for environmental impact assessment of flood protection objects employs multi parametric risk analysis a method intended to not only enhance the transparency and sensitivity of the evaluation process but also successfully addresses the requirements of environmental impact assessment systems in the European Union These modifications are intended to improve the outcomes of the environmental impact assessment but may also be applied to other infrastructure projects The case study proves that the primary aim to improve transparency and minimize subjectivity in the environmental impact assessment process specific to flood protection structure projects is met for the planned project in Krušov Slovakia

Environmental Impact Assessment Practices in the Sub-Saharan Africa Philip Gichonge Ngunjiri,1987

Perspectives on Environmental Impact Assessment B.D. Clark,A. Gilad,R. Bisset,P. Tomlinson,2012-12-06 The experience of highly industrialized countries demonstrates that single minded pursuit of economic development is self defeating because by disregarding the other components of what is commonly called the quality of life it creates conditions which are not acceptable to large sectors of the population In the recent past a number of projects for example major dams have had unexpectedly deleterious social environmental and health consequences As a result many government department and agencies are investigating the impacts of specific projects and are examining the role impact analysis could play in project planning The process of environmental impact analysis has been developed tested and institutionalized in several countries The objective of the process is a prior identification and definition of likely environmental impacts of projects such as public works industrial developments and tourist developments as well as the impact of policies and legislative proposals The environmental impact analysis process also includes the definition of alternative courses of action which would achieve comparable economic objectives while eliminating some or all of the detrimental environmental consequences Identification of preventive or precautionary measures which would minimize the unavoidable impacts form an integral part of the process The aim should be for a balanced appraisal in which economic technical social environmental and health aspects are fully evaluated Thus viewed environmental impact analysis emerges as one of the most powerful planning tools for the prevention of environmental pollution and degradation

systematic manner **The International Law of Environmental Impact Assessment** Neil Craik, 2008-02-21 The central idea animating environmental impact assessment EIA is that decisions affecting the environment should be made through a comprehensive evaluation of predicted impacts Notwithstanding their evaluative mandate EIA processes do not impose specific environmental standards but rely on the creation of open participatory and information rich decision making settings to bring about environmentally benign outcomes In light of this tension between process and substance Neil Craik assesses whether EIA as a method of implementing international environmental law is a sound policy strategy and how international EIA commitments structure transnational interactions in order to influence decisions affecting the international environment Through a comprehensive description of international EIA commitments and their implementation with domestic and transnational governance structures and drawing on specific examples of transnational EIA processes the author examines how international EIA commitments can facilitate interest coordination and provide opportunities for persuasion and for the internalisation of international environmental norms
