Dynamics Of Nuclear Reactors:

Dynamics of Nuclear Reactors David L. Hetrick, 1971 Bridging the gap between the view of the reactor physicist and that of the control engineer this text gives particular attention to lumped parameter dynamic equations or the point reactor model though careful attention is paid to the derivation of this model from neutron diffusion and transport theory The reader is brought up to date in the field of space dependent effects and the dynamics of large reactors pulsed neutron techniques and a brief introduction to neutron waves are included as examples Annotation copyright by Book News Inc Portland OR

Modelling of Nuclear Reactor

Multi-physics Christophe Demazière,2019-11-19 Modelling of Nuclear Reactor Multiphysics From Local Balance Equations to Macroscopic Models in Neutronics and Thermal Hydraulics is an accessible guide to the advanced methods used to model nuclear reactor systems The book addresses the frontier discipline of neutronic thermal hydraulic modelling of nuclear reactor cores presenting the main techniques in a generic manner and for practical reactor calculations The modelling of nuclear reactor systems is one of the most challenging tasks in complex system modelling due to the many different scales and intertwined physical phenomena involved The nuclear industry as well as the research institutes and universities heavily rely on the use of complex numerical codes All the commercial codes are based on using different numerical tools for resolving the various physical fields and to some extent the different scales whereas the latest research platforms attempt to adopt a more integrated approach in resolving multiple scales and fields of physics The book presents the main algorithms used in such codes for neutronic and thermal hydraulic modelling providing the details of the underlying methods together with their assumptions and limitations Because of the rapidly expanding use of coupled calculations for performing safety analyses the analysts should be equally knowledgeable in all fields i.e. neutron transport fluid dynamics heat transfer The first chapter introduces the book's subject matter and explains how to use its digital resources and interactive features The following chapter derives the governing equations for neutron transport fluid transport and heat transfer so that readers not

familiar with any of these fields can comprehend the book without difficulty The book thereafter examines the peculiarities of nuclear reactor systems and provides an overview of the relevant modelling strategies Computational methods for neutron transport first at the cell and assembly levels then at the core level and for one two phase flow transport and heat transfer are treated in depth in respective chapters The coupling between neutron transport solvers and thermal hydraulic solvers for coarse mesh macroscopic models is given particular attention in a dedicated chapter The final chapter summarizes the main techniques presented in the book and their interrelation then explores beyond state of the art modelling techniques relying on more integrated approaches Covers neutron transport fluid dynamics and heat transfer and their interdependence in one reference Analyses the emerging area of multi physics and multi scale reactor modelling Contains 71 short videos explaining the key concepts and 77 interactive quizzes allowing the readers to test their understanding **Kinetics, Stability, and Control** R. L. Johnson,1963 **Conceptual Design of a Fluidized Bed Nuclear Reactor** Alexander Agung,2007 The evolutionary design comprises gradual development and improvements of the power plant to be deployed in future based upon the results of operational records and the implementation of the defense in depth and the probabilistic safety analysis This title focuses on passive safety features and intensive means to prevent core damage Reactor Physics Constants Reactor Physics Constants Center (U.S.),1963 *An Experimental and Modelling Study of Natural-circulation Boiling Water Reactor Dynamics* Róbert Zboray,2002 Contents of this Doctoral Dissertation include Understanding the linear stability characteristics of BWRs Experiments on the stability of the Desire facility Applications of the reducer order model Numerical analysis of the nonlinear dynamics of BWRs Experiments on the nonlinear dynamics of natural circulation two phase flows Experiments on the neutronic thermalhydraulic stability Conclusions and Discussion
