

**STUDY GUIDE : SYSTEMS OF LINEAR EQUATIONS****Solving for Linear Equations**

A system of linear equations consists of two or more linear equations and associated unknown variables.

The solution for a system of linear equations is the ordered pair  $(x, y)$  that makes both equations true.

**Methods for Systems of Linear Equations:** Systems of equations can be solved using various algebraic techniques. Substitution is commonly used to solve systems of linear equations. When linear equations have different slopes, there will be one unique solution. Systems with the same slope will have no solution or infinitely many solutions.

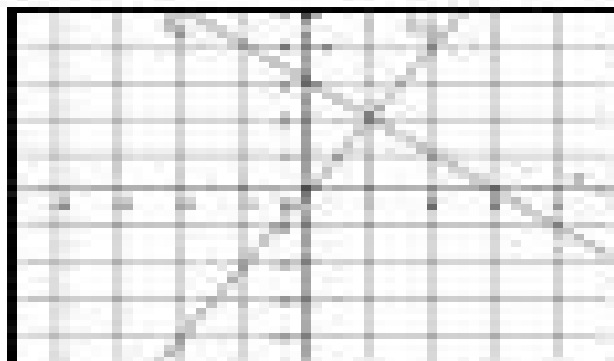

**Substitution:** When linear equations have the same slope, the difference between the constant term provides whether the system has one solution or no solution. Systems with the same slope and different constant terms will have no solution.

**Infinitely Many Solutions:** If equivalent equations have the same slope and the same constant term, the system has infinitely many solutions. Systems with the same slope and the same constant term will have infinitely many solutions.

**Graphing Systems of Linear Equations on a Plane**

When graphing systems of linear equations on a coordinate plane, the solution is the point where the lines intersect. Systems of linear equations can be solved by graphing.

**Example:** The solution for the system of equations below is  $(1, 2)$ .

One equation for  $L_1$  is  $y = x + 2$ . Substituting  $x = 1$  into the linear equation results in the point  $(1, 2)$ .

One equation for  $L_2$  is  $y = x + 3$ . Substituting  $x = 1$  into the linear equation results in the point  $(1, 2)$ .
