Java Grande/ISCOPE Conference ,2002 **After the Software Wars** Keith Curtis, 2009 Computers are an advancement whose importance is comparable to the invention of the wheel or movable type While computers and the Internet have already changed many aspects of our lives we still live in the dark ages of computing because proprietary software is still the dominant model One might say that the richest alchemist who ever lived is my

former boss Bill Gates Oracle founder Larry Ellison and Google co founders Sergey Brin and Larry Page are close behind Human knowledge increasingly exists in digital form so building new and better models requires the software to be improved People can only share ideas when they also share the software to display and modify them It is the expanded use of free software that will allow a greater ability for people to work together and increase the pace of progress This book will demonstrate that a system where anyone can edit share and review the body of work will lead not just to something that works but eventually to the best that the world can achieve With better cooperation among our scientists robot driven cars is just one of the many inventions that will arrive pervasive robotics artificial intelligence and much faster progress in biology all of which rely heavily on software Publisher **Technologies for Home Networking** Sudhir Dixit, Ramjee Prasad, 2008-03-31

Sense and Respond Logistics Robert S. Tripp, Mahyar A. Amouzegar, Ronald G. McGarvey, 2006 This monograph discusses U S Air Force progress toward implementing sense and respond logistics or as defined more broadly sense and respond combat support It describes some of the research that has been conducted on the military combat support system focusing on improvements in prediction capability responsiveness of supply chains and a governing command and control system The report identifies the elements of sense and respond combat support and shows what is necessary to use the concept within the military specifically the Air Force It surveys the state of technology needed to implement the concept and identifies both

the technical work that needs to be further developed and the Air Force organization most appropriate to manage the implementation. The capabilities described involve predicting what will be needed and responding quickly to anticipated or unanticipated needs. The monograph points out the need for both predictive tools and responsive systems working together. A key enabler of sense and response combat support is combat support command and control which involves joint development of a plan in which logistics process performance and resource levels are related to desired operational effects. Establishment of logistics process performance and resource level control parameters, execution of the plan and tracking of control parameters against actual process performance and resource levels, signaling process owners when their processes lie outside control limits and replanning logistics or operational components of the plan to mitigate the portions of the plan that are outside control limits. *Dr. Dobb's Journal*, 2003 **Military, Government and Aerospace Simulation** Kevin J.
