

GEOL 107 - GEOLOGY OF DYNAMIC EARTH - STUDY GUIDE PART 2

This guide contains in an outline/question format the important points that we have covered in the course, you will be expected to have an understanding of this material for an exam

Hydrologic Cycle and River Systems - Chapter 10 in *Physical Geology*

Know the relative distribution of water on the Earth

- Oceans – 96.50%
- Glacial Ice – 1.76%
- Groundwater – 1.70%
- Lakes and Rivers - 0.014%
- Soil Moisture – 0.001%
- Atmosphere - 0.001%

Understand the hydrologic cycle

What are the main parts of the cycle? e.g., evaporation, precipitation, runoff, groundwater, and transpiration. What are the excesses in evaporation vs. precipitation for the oceans and for land? What balances these excesses?

What is a drainage basin? a drainage divide?

Know the four patterns of river drainage and the geologic setting in which they occur

- 1) dendritic
- 2) rectangular
- 3) trellis
- 4) radial

What is a longitudinal profile? How does the longitudinal profile of a river or stream change from its headwaters to its mouth?

What is stream gradient? How does the gradient of a stream change downstream?

What is discharge? How does the discharge of a stream change downstream?

Know that the velocity of a stream is dependent upon both discharge and the stream gradient

What are the typical downstream changes in velocity – what causes these changes?

Know the ways that a river or stream carries the debris of erosion

- 1) bed and saltation load
- 2) suspended load
- 3) dissolved load

Dynamic Earth Study Guide:

The Dynamic Earth, Study Guide Brian J. Skinner, Stephen C. Porter, 1995-01-19 A comprehensive introduction that focuses on all of the major scientific processes of physical geology. Researched and written by two eminent geologists the third edition includes new overarching themes of environmental issues and human interaction with the earth and its resources. Each chapter begins with an essay on this subject. Each part ends with a guest essay on the good stewardship of the Earth how we can take care of our planet. The art program has been revised with 40% new art throughout to reflect current research.

Earth Environments David Huddart, Tim A. Stott, 2020-01-07 Comprehensive coverage of the whole Earth system throughout its entire existence and beyond. Complete with a new introduction by the authors this updated edition helps provide an understanding of the past present and future processes that occur on and in our Earth the fascinating yet potentially lethal set of atmospheric surface and internal processes that interact to produce our living environment. It introduces students to our planet's four key interdependent systems the atmosphere lithosphere hydrosphere and biosphere focusing on their key components the interactions between them and environmental change. The book also uses geological case studies throughout in addition to the modern processes. Topics covered in the Second Edition of Earth Environments Past Present and Future include an Earth systems model components systems and processes atmospheric systems oceanography surface and internal geological

systems biogeography and aspects of Earth's record. The book also discusses the impact of climate and environmental change in a final chapter that draws together Earth's systems and their evolution and looks ahead to potential future changes in Earth's environments. Updated to include all the major developments since 2008. Features research boxes containing summaries based on recent key journal articles. Includes a companion web site containing multiple choice revision quizzes for students. PowerPoint slides for lecturers. Useful links and more. Presents further reading for each topic so that students can build their knowledge base to underpin their own undergraduate research project dissertation. Offers additional case studies in each chapter for enhanced reader understanding. *Earth Environments: Past, Present and Future* is an excellent text for undergraduates in geosciences, environmental science, physical geography, natural hazards and ecology.

Study Guide to Accompany the Dynamic Earth Skinner, *Study Guide* Christopherson, 2003-07. The study guide includes additional learning objectives, a complete chapter outline, critical thinking exercises, problems and short essay work using actual figures from the text, and a self-test with answer key in the back.

Dynamic Earth Eric H. Christiansen, W. Kenneth Hamblin, 2014-02-26. New technologies have given us many different ways to examine the Earth. For example, we can penetrate deep into the interior of our planet and effectively X-ray its internal structure. With this technology comes an increased awareness of how our planet is continually changing and a fresh awareness of how fragile it is. Designed for the introductory Physical Geology course found in Geology, Earth Science, Geography, or Physical Science departments. *Dynamic Earth: An Introduction to Physical Geology* clearly presents Earth's dynamic geologic systems with their many interdependent and interconnected components. It provides comprehensive coverage of the two major energy systems of Earth: the plate tectonic system and the hydrologic cycle. The text fulfills the needs of professors by offering current content and a striking illustration package while exposing students to the global view of Earth and teaching them to view the world as geologists.

Resources for Teaching Middle School Science Smithsonian Institution, National Academy of Engineering, National Science Resources Center of the National Academy of Sciences, Institute of Medicine, 1998-04-30. With age-appropriate inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. *Resources for Teaching Middle School Science* developed by the National Science Resources Center (NSRC) is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of *Resources for Teaching Elementary School Science*, the first in the NSRC series of annotated guides to hands-on inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area: Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type: core materials, supplementary units, and science activity.

books Each annotation of curriculum material includes a recommended grade level a description of the activities involved and of what students can be expected to learn a list of accompanying materials a reading level and ordering information The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide The criteria reflect and incorporate goals and principles of the National Science Education Standards The annotations designate the specific content standards on which these curriculum pieces focus In addition to the curriculum chapters the guide contains six chapters of diverse resources that are directly relevant to middle school science Among these is a chapter on educational software and multimedia programs chapters on books about science and teaching directories and guides to science trade books and periodicals for teachers and students Another section features institutional resources One chapter lists about 600 science centers museums and zoos where teachers can take middle school students for interactive science experiences Another chapter describes nearly 140 professional associations and U S government agencies that offer resources and assistance Authoritative extensive and thoroughly indexed and the only guide of its kind Resources for Teaching Middle School Science will be the most used book on the shelf for science teachers school administrators teacher trainers science curriculum specialists advocates of hands on science teaching and concerned parents
