**Dynamic Wireless Sensor Networks** Sharief M. A. Oteafy, Hossam S. Hassanein, 2014-08-08 In this title the authors leap into a novel paradigm of scalability and cost effectiveness on the basis of resource reuse In a world with much abundance of wirelessly accessible devices WSN deployments should capitalize on the resources already available in the region of deployment and only augment it with the components required to meet new application requirements However if the required resources already exist in that region WSN deployment converges to an assignment and scheduling scheme to accommodate for the new application given the existing resources Such resources are polled from many fields including multiple WSNs already in the field static networks WiFi WiMAX cellular etc in addition to municipal industrial and mobile resources The architecture framework and pricing policy as well as approaches for backward compatibility with existing deployments are presented in this book We elaborate on the formalization of the problem and contrast with existing work on coverage This paradigm adopts optimal assignments in WSNs and exploits dynamic re programming for boosting post deployment and backward compatible protocols Handbook of Sensor Networks Mohammad Ilyas, Imad

Security Protocol for Wireless Sensor Networks Adil Bashir,Ajaz Hussain Mir,2021-07-21 Master s Thesis from the year 2013 in the subject Computer Science Internet New Technologies grade 8 12 course M Tech language English abstract Wireless sensor network WSN is an emerging imperious leading technology of the current century that presents great promise for various pioneering applications The use of sensor networks should keep developing mainly in the fields of scientific logistic healthcare and military applications Sensor networks interact and collect sensitive data and operate in unattended hostile environments thus it is imperative to pay attention to the security of wireless sensor networks as they are highly prone to threats For successful operation of the nodes it is important to maintain the security and privacy of the transmitted data as well as the data stored at nodes The different security protocols and models used in the wired and other wireless networks such as ad hoc networks cannot be used in WSNs because the sensor size poses significant restrictions mainly in terms of energy autonomy and node lifetime as the batteries have to be too tiny Also the existing security protocols in these constrained networks are not sufficiently energy efficient which is the real motivation behind this work In this thesis a light weight dynamic security algorithm titled An Energy Efficient and Dynamic Security Protocol EEDSP for wireless sensor networks has been proposed and implemented at nodal level We also implement an existing algorithm and then carry out the performance analysis of both the algorithms in terms of energy consumptions node lifetime and memory requirements at source and intermediate nodes to verify the improvement in our protocol s results **Implementation of Machine**

**Learning Algorithms Using Control-Flow and Dataflow Paradigms** Milutinović, Veljko,Mitić, Nenad,Kartelj, Aleksandar,Kotlar, Miloš,2022-03-11 Based on current literature and cutting edge advances in the machine learning field there are four algorithms whose usage in new application domains must be explored neural networks rule induction algorithms tree based algorithms and density based algorithms A number of machine learning related algorithms have been derived from these four algorithms Consequently they represent excellent underlying methods for extracting hidden knowledge from unstructured data as essential data mining tasks Implementation of Machine Learning Algorithms Using Control Flow and Dataflow Paradigms presents widely used data mining algorithms and explains their advantages and disadvantages their mathematical treatment applications energy efficient implementations and more It presents research of energy efficient accelerators for machine learning algorithms Covering topics such as control flow implementation approximate computing and decision tree algorithms this book is an essential resource for computer scientists engineers students and educators of higher education researchers and academicians *Emerging Research in Computing, Information, Communication and Applications* N.
